

Want to Make a Difference Concerning the Environment?

Apply for a STEPS & Environmental Initiative
Summer Undergraduate Research Fellowship
Summer 2015 Proposals are accepted and evaluated through
February 13. Funding is limited.

STEPS and the Environmental Initiative offers funding to encourage students from all majors and all Colleges to engage in creative, independent research and scholarship under faculty supervision that focuses on the intersection of energy, environment, policy, economics, and sustainability. These grants are intended to fund paid summer fellowships of 6 or 10 weeks duration that will correspond with full or second summer semester time periods established by the registrar, or credit-bearing fellowships during the academic year. All summer fellowships conclude by mid-August.

Research activities are showcased in a full-day seminar held each September.

A student must have 2.7 GPA to qualify for a semester or year study abroad program and a 2.0 GPA (= good academic standing) for a short-term program. Please note that these are Lehigh's GPA requirements and that individual programs may have different standards.

Students can also petition, if need be.

Visit “Student Opportunities” on our [website](#) to learn more about the program and to complete an [application submission](#).
